East Kemper Road Water Main Break

Greater Cincinnati Water Works (GCWW) is working to repair a section of East Kemper Road in Springdale that was damaged by a water main break on August 31.

The break impacted about 300 feet of eastbound Kemper Road near its intersection with Chesterdale Road.

The water main has already been repaired and is back in service. The damaged pavement has been removed, and the area was backfilled with new fill today. The roadway is anticipated to be repaved this week, depending on the weather and traffic.

Estimated repair costs are between \$50,000-\$100,000.

The two eastbound lanes and the center turn lane on East Kemper Road are currently closed to traffic in this area. The two westbound lanes are one way in each direction.

The traffic pattern will return to normal as soon as repaving of the roadway can be completed.
